

ABSTRACT OF THE DISCLOSURE

An input unit device is constructed of a setup screen of a multi-stage type to enable conditions to be input, a setup confirmation screen for displaying the setup conditions in a package, a memory registration command section for allowing the setup conditions to be stored in memories and a memory call-up command section for allowing the setup conditioned to be called up from the memory for reuse. The memory registration command section is located on the setup confirmation screen. An image forming apparatus reads out setup image reproducing conditions stored in the setup condition input device for reproducing the image.
